Claude AI & Claude Code Tutorial — 60-second sample

Sample episode: “Claude AI Interface Explained: Where to Find Every Important Option” · production & QC report · 24 Oct 2026

60.000 s	1920×1080	-14.0 LUFS	15/15 PASS
1800 frames @ 30 fps	H.264 High · yuv420p	true peak -1.3 dBTP · AAC 48000 Hz	automated QC checks

Read first: what is real and what is not.

- **0:00–0:30 (Claude AI web interface) is an illustrative DEMO UI, not a screen recording.** claude.ai is blocked by this environment's network policy (HTTP 403), and no Claude account is logged in, so the real web interface could not be opened. The demo layout uses only elements confirmed in Anthropic's Help Center. It carries a "DEMO UI" label on screen the whole time. Replace it with your own recordings before publishing (section 5).
- **0:30–0:43 (Claude Code) is a genuine screen recording:** Claude Code CLI v2.1.310 really running in a terminal (Xvfb + xterm, captured with FFmpeg x11grab) on a fictional demo project. Its Hinglish answer is Claude Code's real, unedited output. The 12 s wait for the response is compressed to 1 s and labelled "Fast-forward".
- **The narration is synthetic** (offline Kokoro TTS, Hindi voice `hm_omega`). I couldn't listen to it, and no speech-recognition model could be downloaded here, so its pronunciation has **not** been checked by ear. Please review it, or replace it with a human Hindi voice-over (a no-voice version is provided).
- Your Claude account wasn't accessed, your screen wasn't recorded, and no private data was used.

1. Environment inspection

Item	Finding	Used?
OS / project	Ubuntu 24.04 cloud container; repo had one earlier project (`fact-arcana-short/`), left untouched	—
Claude Code	CLI v2.1.310 installed and working (`claude -p` tested on a fictional project)	Yes: genuine recording
Browser	Playwright + Chromium pre-installed	Yes: rendering motion graphics
claude.ai web app	Blocked by network policy (403); no logged-in account	No: demo UI used instead
Screen recording	Xvfb virtual display + xterm + FFmpeg x11grab available	Yes: terminal recording
FFmpeg	6.1.1 (libx264, AAC, loudnorm, ebur128, blackdetect, freezedetect)	Yes

Text-to-speech	No system TTS. Google/Microsoft TTS and HuggingFace blocked. vidIQ voiceover needs ~14 credits (account has 4). Kokoro TTS (open weights, from GitHub releases) runs offline with 4 Hindi voices	Yes: Kokoro `hm_omega`
Speech recognition (for QC)	Whisper model hosts blocked	No: pronunciation unverified
Graphics / subtitles	Inter, Inter Display, JetBrains Mono fonts; ImageMagick; Python PIL/numpy; libass	Yes
Music	No stock library used. Original music bed generated procedurally (numpy)	Yes

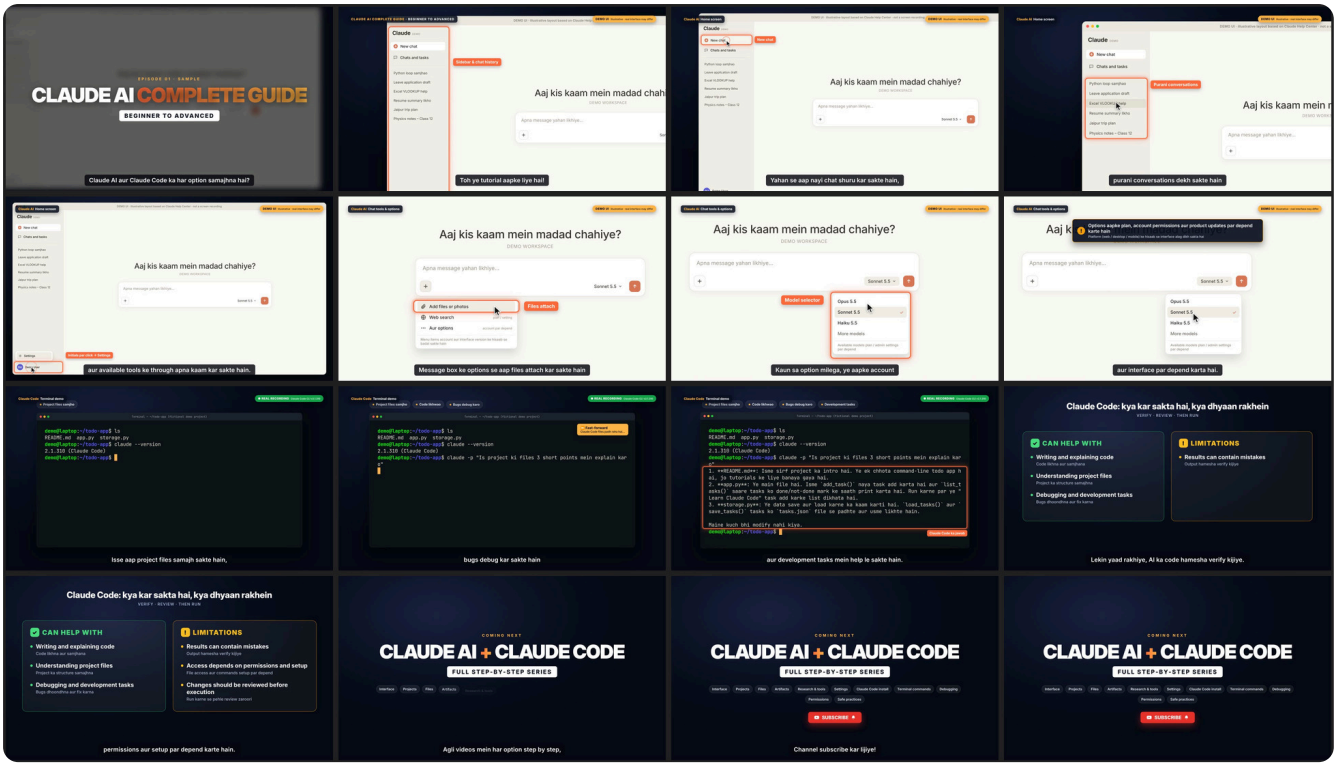

2. Automated QC (final file)

Check	Result	Detail
Resolution 1920×1080	**PASS**	1920×1080
Frame rate 30 fps	**PASS**	30/1
Video codec H.264 (yuv420p)	**PASS**	h264 High yuv420p
Audio codec AAC	**PASS**	aac 48000 Hz 2 ch
Exactly 1800 frames (60.000 s @ 30 fps)	**PASS**	1800 frames, video stream 60.000 s
Duration 60 s (±0.05 s)	**PASS**	container 60.000 s, audio 60.000 s
No black frames / segments	**PASS**	0 black segments
No static shot longer than 2.5 s	**PASS**	0 frozen spans
Loudness ≈ -14 LUFS (YouTube)	**PASS**	-14.0 LUFS integrated, LRA 2.3 LU
True peak ≤ -1.0 dBTP	**PASS**	-1.3 dBTP
Full decode without errors	**PASS**	clean
Captions text == narration lines	**PASS**	21 captions / 21 narration phrases
Captions in sync with voice	**PASS**	max start offset 0 ms; every caption covers its phrase; overlaps: False
Narration ends before 60 s	**PASS**	last word ends 59.68 s
Caption reading speed ≤ 21 chars/s	**PASS**	max 18.1 chars/s

Music vs voice: the music sits **≈19.9 dB below the narration** while speaking (envelope-follower ducking), and percussion drops out during the terminal demo. A/V sync holds by construction: narration phrases, captions, highlights and clicks are all placed on the same 60 s timeline from the TTS timing file. Captions are burned into a reserved bottom band. The demo-UI zooms and the terminal window were laid out so no button, menu or terminal output sits under them (checked frame by frame on 20+ stills).

Visually checked by me, not by a tool: no captions over buttons or terminal output, text readable at 1080p, highlights land on the right controls. **Not verified:** how the TTS voice sounds (see above).

3. Key frames (from the final MP4)

Frames at 1.5, 4.2, 10.6, 13.2, 17.6, 21.4, 26.0, 28.5, 34.5, 38.0, 40.5, 46.5, 51.0, 54.8, 58.6 and 59.95 s. The last frame is a full end card (no fade to black).

Thumbnail concept

4. Narration & subtitles (Hinglish)

21 caption lines = 21 narration phrases. TTS speed per scene: S1 1.199×, S2 1.22×, S3 1.208×, S4 1.054×, S5 1.201×, S6 1.21×. Full Devanagari TTS script and wording changes: `voiceover/narration.md`. SRT: `subtitles/claude_ai_interface_sample_60s.hinglish.srt`.

#	Scene	Time	Line
1	S1	0:00.25–0:03.42	Claude AI aur Claude Code ka har option samajhna hai?
2	S1	0:03.64–0:05.58	Toh ye tutorial aapke liye hai!
3	S2	0:06.40–0:09.29	Sabse pehle Claude AI ka home screen samajhiye.
4	S2	0:09.51–0:11.87	Yahan se aap nayi chat shuru kar sakte hain,
5	S2	0:12.01–0:14.28	purani conversations dekh sakte hain
6	S2	0:14.42–0:17.57	aur available tools ke through apna kaam kar sakte hain.
7	S3	0:18.40–0:21.95	Message box ke options se aap files attach kar sakte hain
8	S3	0:22.09–0:24.31	aur supported tools use kar sakte hain.
9	S3	0:24.53–0:27.09	Kaun sa option milega, ye aapke account
10	S3	0:27.23–0:29.43	aur interface par depend karta hai.
11	S4	0:30.50–0:33.08	Claude Code ek alag coding workflow hai.
12	S4	0:33.30–0:36.08	Isse aap project files samajh sakte hain,
13	S4	0:36.22–0:37.64	code likhwa sakte hain,
14	S4	0:37.78–0:39.54	bugs debug kar sakte hain
15	S4	0:39.68–0:42.71	aur development tasks mein help le sakte hain.
16	S5	0:43.40–0:47.05	Lekin yaad rakhiye, AI ka code hamesha verify kijiye.
17	S5	0:47.27–0:49.79	File access, commands aur advanced features
18	S5	0:49.93–0:52.55	permissions aur setup par depend karte hain.
19	S6	0:53.25–0:56.05	Agli videos mein har option step by step,
20	S6	0:56.19–0:57.62	basic se advanced tak.
21	S6	0:57.84–0:59.68	Channel subscribe kar lijiye!

Wording changes from the brief. The brief's lines need about 69 s of natural speech for a 60 s video, so the hook (S1), S3, S5 and S6 lines were shortened without changing their meaning (e.g. S1 → “Claude AI aur Claude Code ka har option samajhna hai? Toh ye tutorial aapke liye hai!”). Before/after table in `narration.md`.

5. Missing recordings / assets (before publishing)

Needed	Replaces	Notes
Real Claude home screen, still (`rec_s1_home_clean.mp4`)	0:00–0:06 demo UI	The edit adds the zoom
Sidebar / New chat / history / initials → Settings (`rec_s2_sidebar.mp4`)	0:06–0:18	Use demo chats only; hide your email and name
"+" menu: Add files or photos, available tools (`rec_s3_plus_menu.mp4`)	0:18–0:24	Note your exact labels; new Claude experience has no web search toggle
Model menu next to send (`rec_s3_model_menu.mp4`)	0:24–0:30	Models differ by plan and admin settings
Human Hindi voice-over (recommended)	TTS narration	Record over `…_music_sfx_only.mp4` using the timings above
Channel logo / brand colours (optional)	Generic title styling	No Anthropic logos were used

Step-by-step instructions: `recording_checklist.md`.

6. Interface facts used and their sources

Shown	Source (Claude Help Center / docs, checked 24 Oct 2026)
"+" button lower-left of the chat box → "Add files or photos"	support.claude.com · Upload files to Claude (8241126)
"Web search" in the "+" menu; Team/Enterprise owners must enable it; new Claude experience has no toggle	Enable and use web search (10684626)
Model name next to the send button → model menu, "More models"; admins may hide models	Change the model, effort, and thinking settings (8664678); Get started with Claude (8114491)
Left sidebar, "Chats and tasks" for full history	Delete or rename a conversation (8230524)
Initials or name at the bottom-left → Settings	Customizing your appearance settings (8887527)
Claude Code: terminal / IDE / desktop / web; reads the codebase, edits files, runs commands; needs a subscription or Console account	code.claude.com/docs/en/overview

Not claimed: pricing, exact visual styling, or any menu item that couldn't be confirmed.

7. Deliverables

File	Contents
`output/claude_ai_interface_sample_60s.mp4`	Main sample, burned-in captions (12.16 MB)
`output/claude_ai_interface_sample_60s_clean_softsub.mp4`	No burned captions; Hinglish SRT as a selectable track

`output/claude_ai_interface_sample_60s_music_sfx_only.mp4`	No narration, for a human voice-over
`subtitles/…hinglish.srt` · `voiceover/narration.md` · `storyboard.md` · `recording_checklist.md`	Subtitles, narration, shot-by-shot storyboard, recording checklist
`recordings/claude_code_terminal_raw.mp4`	Genuine raw terminal recording (25.8 s)
`scripts/` · `graphics/` · `assets/`	All build scripts, scene renderer, thumbnail, demo project, music and SFX stems

The full series hasn't been started, as requested.
